Installing Git Bash & Setting up Git for GitHub Actions

1. Download Git for Windows

Open your browser and go to:

https://git-scm.com/install/windows

Under Windows, click Download.

This will download the installer (.exe file).

2. Install Git Bash

Run the downloaded installer.

Follow the installation wizard:

- Select Destination Location → Keep default (C:\Program Files\Git).
- Select Components → Leave defaults checked.
- Select Start Menu Folder → Default is fine.
- Choosing the default editor → Select Visual Studio Code (recommended).
- Adjusting PATH environment → Select:
  "Git from the command line and also from 3rd-party software".
- HTTPS transport backend → Choose Use HTTPS.
- Line endings → Choose:
  "Checkout Windows-style, commit Unix-style line endings".
- Leave the rest as default and click Install.

Once installation completes, launch Git Bash.

3. Verify Installation

Open Git Bash and run:

git --version

Expected output:

git version 2.xx.x.windows.x

4. Configure Git (First-Time Setup) in your VS code terminal give below inputs (Set your username and email (used for commits)) :

git config --global user.name "Your Name"

git config --global user.email "youremail@example.com"

Verify configuration:

git config --list
